

**CDOT Project Engineer Certification - Permanent Water Quality**

I oversaw the permanent water quality pond(s) constructed on this project and attached are the as-built drawings and change orders (as applicable). Construction was inspected by CDOT (or contracted) staff and to the best of my knowledge, belief and opinion, the drainage facilities were constructed in accordance with the design. I received the materials identified in Specification 208.10 (b) – Survey of Permanent Water Quality control measures, and delivered them to the Hydraulic Engineer with this coversheet.
